

# Introducing Hydraulic Jacks by HWH® For Commercial Van Style Vehicles

- Designed for broadcast and other commercial van-style and box-style vehicles that need quick, strong rear jacks while on location.
- The straight-acting, telescoping design provides extra lift without requiring extra mounting clearance.
- These unique jacks have a closed length of 15.5" and an extended length of 28.5".

- By utilizing hydraulic power-down with dual retracting springs, you get strong, reliable jacks that will not leave you stranded in the event of a hydraulic or electrical failure.
- The outward pivoting action of the jack braces the vehicle with excellent stability, while the ball and socket footpad provide maximum foot-to-ground contact.

- The pendant controller allows you to watch the jacks as you operate the system.
- Also features an auto shut-off and jacks-down warning signal.

HWH gives you what you need... fast, strong rear jacks to keep your workstation stable.  
*Four-jack systems also available. Please call HWH for details.*

*Taking you to the next level.*
